NGFOR & NGIF

1. Ketikkan kode berikut pada app.component.html

```
1 <div class="container">
2   <div class="row">
3     <div class="col-xs-12">
4       <button class="btn btn-primary"
5         (click)="onlyOdd=!onlyOdd">
6         only show odd numbers
7       </button>
8       <br>
9       <br>
10      <ul class="list-group">
11        <li class="list-group-item"></li>
12      </ul>
13    </div>
14  </div>
15</div>
```

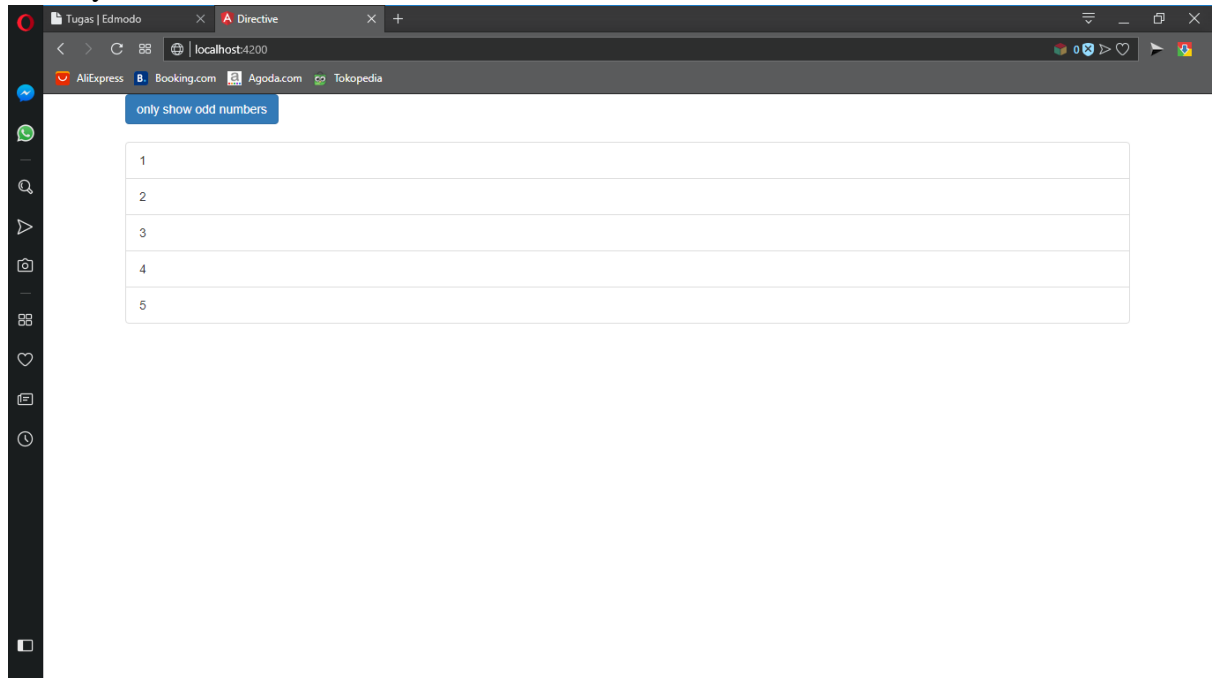

2. Tambahkan kode berikut pada app.component.ts

```
1 import { Component } from '@angular/core';
2
3 @Component({
4   selector: 'app-root',
5   templateUrl: './app.component.html',
6   styleUrls: ['./app.component.css']
7 })
8 export class AppComponent {
9   title = 'NgFor-NgIf';
10  numbers = [1,2,3,4,5];
11  onlyOdd = false;
12 }
13
```

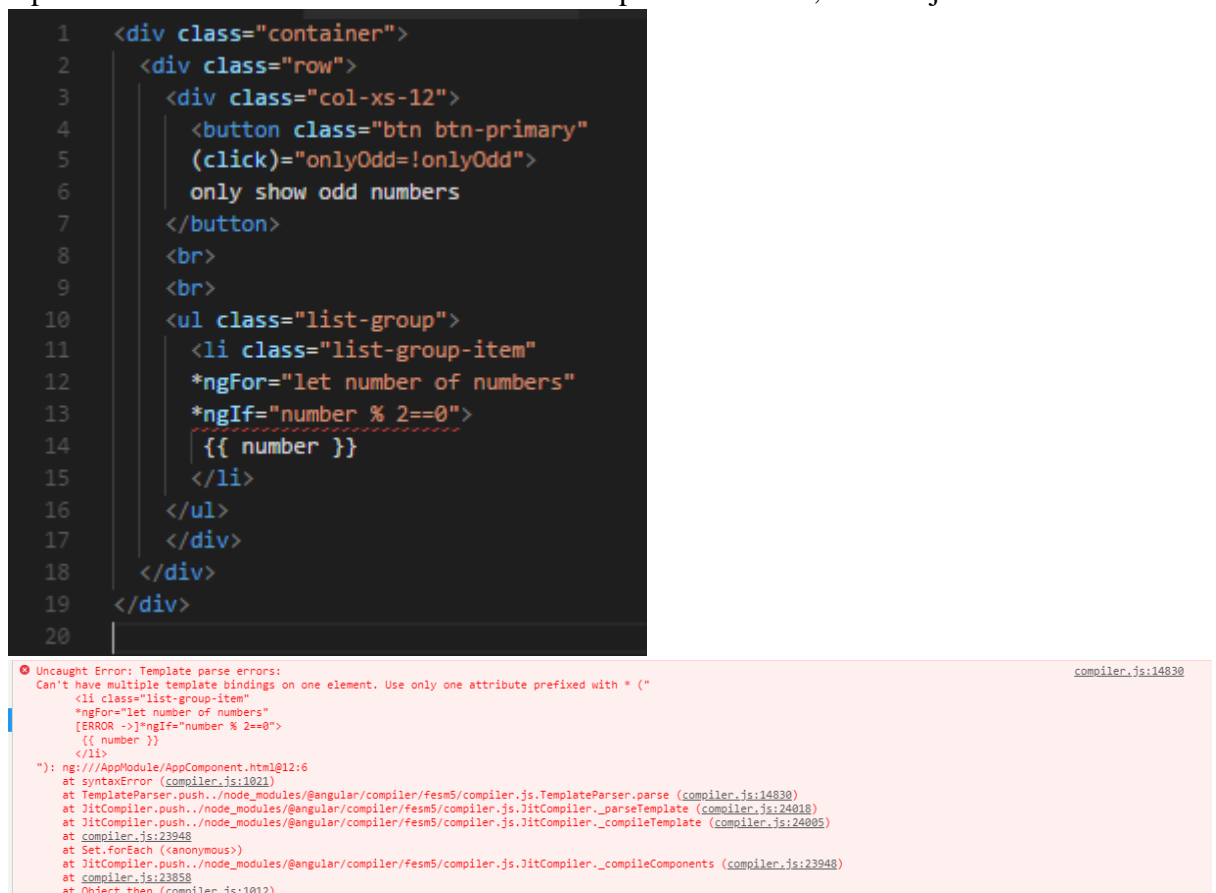

3. Tambahkan NgIf pada app.component.html

```
1 <div class="container">
2   <div class="row">
3     <div class="col-xs-12">
4       <button class="btn btn-primary"
5         (click)="onlyOdd=!onlyOdd">
6         only show odd numbers
7       </button>
8       <br>
9       <br>
10      <ul class="list-group">
11        <li class="list-group-item"
12          *ngIf="let number of numbers">
13          {{ number }}
14        </li>
15      </ul>
16    </div>
17  </div>
18</div>
19
```

Hasilnya :

4. Apabila kita menambahkan 2 struktur directive pada 1 element, akan terjadi error

5. Tambahkan kode berikut pada app.component.ts

```
1 import { Component } from '@angular/core';
2
3 @Component({
4   selector: 'app-root',
5   templateUrl: './app.component.html',
6   styleUrls: ['./app.component.css']
7 })
8 export class AppComponent {
9   title = 'NgFor-NgIf';
10  // numbers = [1, 2, 3, 4, 5];
11  oddNumbers = [1, 3, 5];
12  evenNumbers = [2, 4];
13  onlyOdd = false;
14 }
15
```

6. Membagi ngFor dan ngIf

```
1 <div class="container">
2   <div class="row">
3     <div class="col-xs-12">
4       <button class="btn btn-primary"
5         (click)="onlyOdd=!onlyOdd">
6         only show odd numbers
7       </button>
8       <br>
9       <br>
10      <ul class="list-group">
11        <div *ngIf="onlyOdd">
12          <li class="list-group-item"
13            *ngFor="let odd of oddNumbers">
14            {{ odd }}
15          </li>
16        </div>
17        <div *ngIf="!onlyOdd">
18          <li class="list-group-item"
19            *ngFor="let even of evenNumbers">
20            {{ even }}
21          </li>
22        </div>
23      </ul>
24    </div>
25  </div>
26 </div>
27
```

Hasilnya :

Sebelum diklik

only show odd numbers

2

4

Sesudah diklik

only show odd numbers

1

3

5

NGCLASS & NGSTYLE

1. Tambahkan kode berikut pada app.component.html

```
1 <div class="container">
2   <div class="row">
3     <div class="col-xs-12">
4       <button class="btn btn-primary"
5         (click)="onlyOdd=!onlyOdd">
6         only show odd numbers
7       </button>
8       <br>
9       <br>
10      <ul class="list-group">
11        <div *ngIf="onlyOdd">
12          <li class="list-group-item"
13            [ngClass]="{'odd': true}"
14            [ngStyle]="{'backgroundColor': true ? 'yellow': 'transparent'}"
15            *ngFor="let odd of oddNumbers">
16            {{ odd }}
17          </li>
18        </div>
19        <div *ngIf="!onlyOdd">
20          <li class="list-group-item"
21            [ngClass]="{'even': true}"
22            [ngStyle]="{'backgroundColor': false ? 'yellow': 'transparent'}"
23            *ngFor="let even of evenNumbers">
24            {{ even }}
25          </li>
26        </div>
27      </ul>
28    </div>
29  </div>
30</div>
```

```
1 .odd {
2   color : red;
3 }
```

2. Hasilnya :

only show odd numbers

2

4

only show odd numbers

1

3

5

DASAR MEMBUAT ATTRIBUT DIRECTIVE

1. Buat folder basic-highlight, lalu generate directive dengan cara klik kanan > Generate Directive

2. Tambahkan kode berikut pada directive default

```
1 import { Directive, ElementRef, OnInit } from '@angular/core';
2
3 @Directive({
4   selector: '[appBasicHighlight]'
5 })
6 export class BasicHighlightDirective implements OnInit {
7
8   constructor(private elementRef: ElementRef) { }
9
10  ngOnInit() {
11    this.elementRef.nativeElement.style.backgroundColor = 'green';
12  }
13 }
14
```

3. Tambahkan kode berikut pada app.component.html

```
1 <div class="container">
2   <div class="row">
3     <div class="col-xs-12">
4       <button class="btn btn-primary"
5         (click)="onlyOdd=!onlyOdd">
6         only show odd numbers
7       </button>
8       <br>
9       <br>
10      <ul class="list-group">
11        <div *ngIf="onlyOdd">
12          <li class="list-group-item"
13            [ngClass]="{'odd': true}"
14            [ngStyle]="{'backgroundColor': true ? 'yellow': 'transparent'}"
15            *ngFor="let odd of oddNumbers">
16            {{ odd }}
17          </li>
18        </div>
19        <div *ngIf="!onlyOdd">
20          <li class="list-group-item"
21            [ngClass]="{'even': true}"
22            [ngStyle]="{'backgroundColor': false ? 'yellow': 'transparent'}"
23            *ngFor="let even of evenNumbers">
24            {{ even }}
25          </li>
26        </div>
27      </ul>
28      <p appBasicHighlight> Style me with directives </p>
29    </div>
30  </div>
31 </div>
```

Hasilnya :

only show odd numbers

2

4

Style me with directives

RENDERER

1. Buat folder better-highlight dan generate directive baru

2. Tambahkan kode berikut pada better-highlight.directive.ts

```
1  import { Directive, ElementRef, Renderer2, OnInit } from '@angular/core';
2
3  @Directive({
4    selector: '[appBetterHighlight]'
5  })
6  export class BetterHighlightDirective implements OnInit {
7
8    constructor(private elRef: ElementRef, private renderer: Renderer2) { }
9
10   ngOnInit() {
11     this.renderer.setStyle(this.elRef.nativeElement, 'background-color', 'blue');
12   }
13 }
```

3. Tambahkan kode berikut di line 29 pada app.component.html

```
28 <p appBasicHighlight> Style me with directives </p>
29 <p appBetterHighlight> Style me with better </p>
```

Hasil :

only show odd numbers

2

4

Style me with better

MENGGUNAKAN HOSTLISTENER UNTUK EVENT HOST

1. Tambahkan kode berikut pada better-highlight.directive.ts

```
1 import { Directive, ElementRef, Renderer2, OnInit, HostListener } from '@angular/core';
2 import { MockNgModuleResolver } from '@angular/compiler/testing';
3
4 @Directive({
5   selector: '[appBetterHighlight]'
6 })
7 export class BetterHighlightDirective implements OnInit {
8
9   constructor(private elRef: ElementRef, private renderer: Renderer2) { }
10
11   ngOnInit() {
12     // this.renderer.setStyle(this.elRef.nativeElement, 'background-color', 'blue');
13   }
14
15   @HostListener('mouseover') mouseover(eventData: Event) {
16     this.renderer.setStyle(this.elRef.nativeElement, 'background-color', 'blue');
17   }
18   @HostListener('mouseleave') mouseleave(eventData: Event) {
19     this.renderer.setStyle(this.elRef.nativeElement, 'background-color', 'transparent');
20   }
21
22 }
23 }
```

Hasilnya :

Not hovering

Hovering

PROPERTY BINDINGS PADA DIRECTIVE

1. Rubah kode pada better-highlight.directive.ts menjadi berikut

```
1 import { Directive, ElementRef, Renderer2, OnInit, HostListener, HostBinding } from '@angular/core';
2 import { MockNgModuleResolver } from '@angular/compiler/testing';
3
4 @Directive({
5   selector: '[appBetterHighlight]'
6 })
7 export class BetterHighlightDirective implements OnInit {
8
9   @HostBinding('style.backgroundColor') backgroundColor: string = 'transparent';
10
11   constructor(private elRef: ElementRef, private renderer: Renderer2) { }
12
13   ngOnInit() {
14     // this.renderer.setStyle(this.elRef.nativeElement, 'background-color', 'blue');
15   }
16
17   @HostListener('mouseover') mouseover(eventData: Event) {
18     // this.renderer.setStyle(this.elRef.nativeElement, 'background-color', 'blue');
19     this.backgroundColor = 'blue';
20   }
21   @HostListener('mouseleave') mouseleave(eventData: Event) {
22     // this.renderer.setStyle(this.elRef.nativeElement, 'background-color', 'transparent');
23     this.backgroundColor = 'transparent';
24   }
25 }
```

Hasilnya :

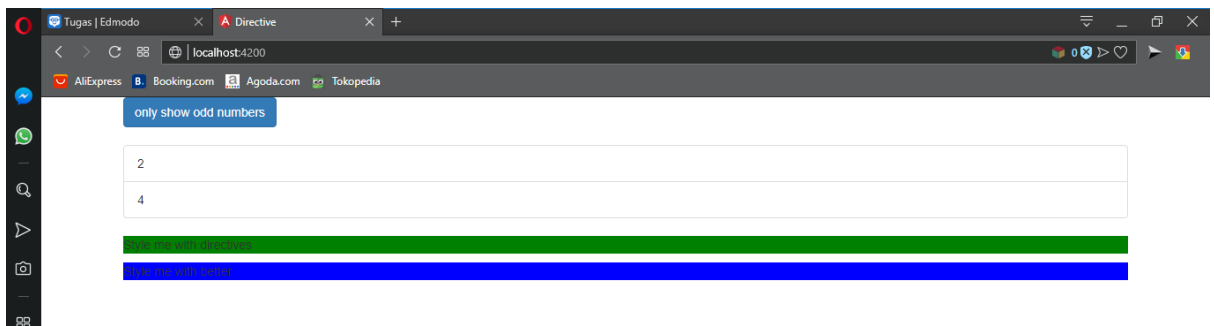

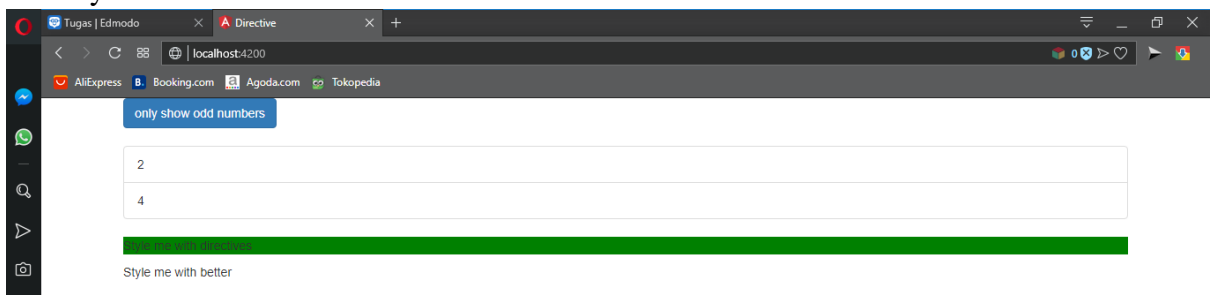

Tetap sama

2. Rubah kode pada better-highlight menjadi sebagai berikut

```
1 import { Directive, ElementRef, Renderer2, OnInit, HostListener, HostBinding, Input } from '@angular/core';
2 import { MockNgModuleResolver } from '@angular/compiler/testing';
3
4 @Directive({
5   selector: '[appBetterHighlight]'
6 })
7 export class BetterHighlightDirective implements OnInit {
8
9   @Input() defaultColor: string = 'transparent';
10   @Input() highlightColor: string = 'blue';
11   @HostBinding('style.backgroundColor') backgroundColor: string = this.defaultColor;
12   // @HostBinding('style.backgroundColor') backgroundColor: string = 'transparent';
13
14   constructor(private elRef: ElementRef, private renderer: Renderer2) { }
15
16   ngOnInit() {
17     // this.renderer.setStyle(this.elRef.nativeElement, 'background-color', 'blue');
18   }
19
20   @HostListener('mouseover') mouseover(eventData: Event) {
21     // this.renderer.setStyle(this.elRef.nativeElement, 'background-color', 'blue');
22     // this.backgroundColor = 'blue';
23     this.backgroundColor = this.highlightColor;
24   }
25   @HostListener('mouseleave') mouseleave(eventData: Event) {
26     // this.renderer.setStyle(this.elRef.nativeElement, 'background-color', 'transparent');
27     // this.backgroundColor = 'transparent';
28     this.backgroundColor = this.defaultColor;
29   }
30 }
```

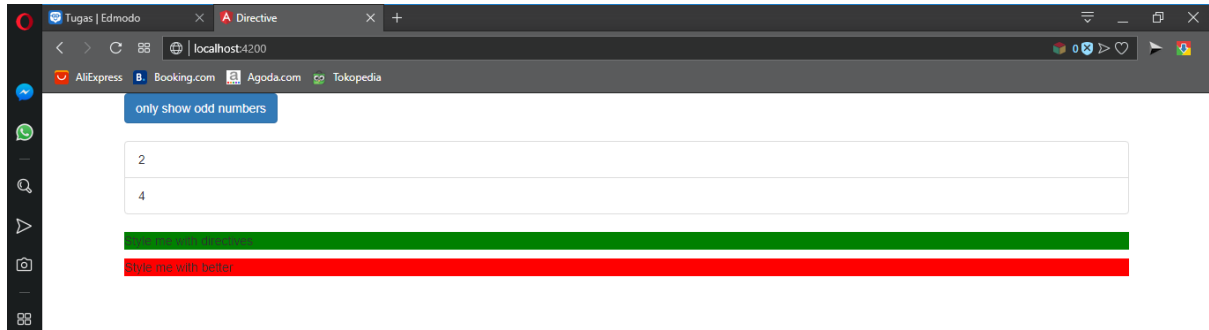

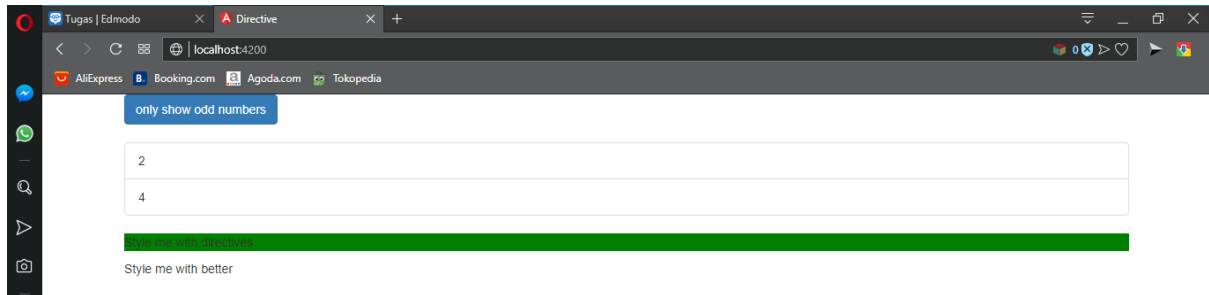

Hasilnya :

3. Tambahkan kode berikut pada app.component.html

```
</ul>
<p appBasicHighlight> Style me with directives </p>
<p appBetterHighlight [defaultColor]="yellow"
[highlightColor]="red"> Style me with better </p>
</div>
```

Hasilnya :

4. Ubah kode pada better-highlight menjadi seperti ini

```
2 import { MockNgModuleResolver } from '@angular/compiler/testing';
3
4 @Directive({
5   selector: '[appBetterHighlight]'
6 })
7 export class BetterHighlightDirective implements OnInit {
8
9   @Input() defaultColor: string = 'transparent';
10  @Input() highlightColor: string = 'blue';
11  // @HostBinding('style.backgroundColor') backgroundColor: string = this.defaultColor;
12  @HostBinding('style.backgroundColor') backgroundColor: string;
13  // @HostBinding('style.backgroundColor') backgroundColor:string= 'transparent';
14
15  constructor(private elRef: ElementRef, private renderer: Renderer2) { }
16
17  ngOnInit() {
18    this.backgroundColor = this.defaultColor;
19    // this.renderer.setStyle(this.elRef.nativeElement, 'background-color', 'blue');
20  }
21
22  @HostListener('mouseover')mouseover(eventData: Event) {
23    // this.renderer.setStyle(this.elRef.nativeElement, 'background-color', 'blue');
24    // this.backgroundColor = 'blue';
25    this.backgroundColor = this.highlightColor;
26  }
27  @HostListener('mouseleave')mouseleave(eventData: Event) {
28    // this.renderer.setStyle(this.elRef.nativeElement, 'background-color', 'transparent');
29    // this.backgroundColor = 'transparent';
30    this.backgroundColor = this.defaultColor;
31  }
32 }
```

Hasilnya :

Berbeda dengan yang sebelumnya, saat pertama laman termuat, better-highlight langsung berwarna kuning.

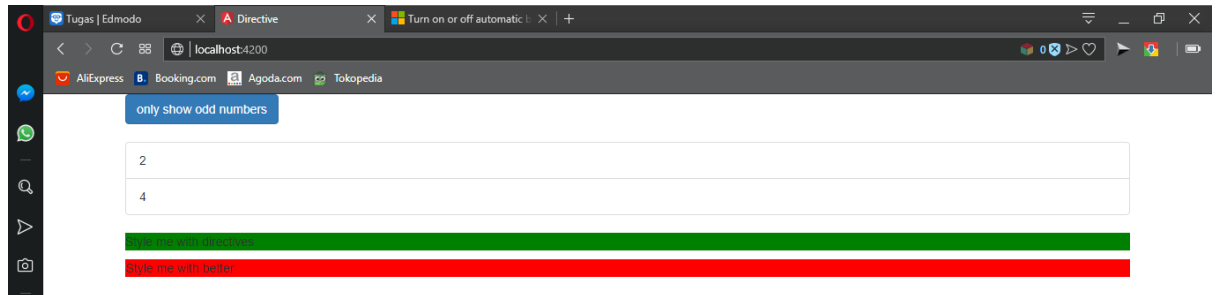

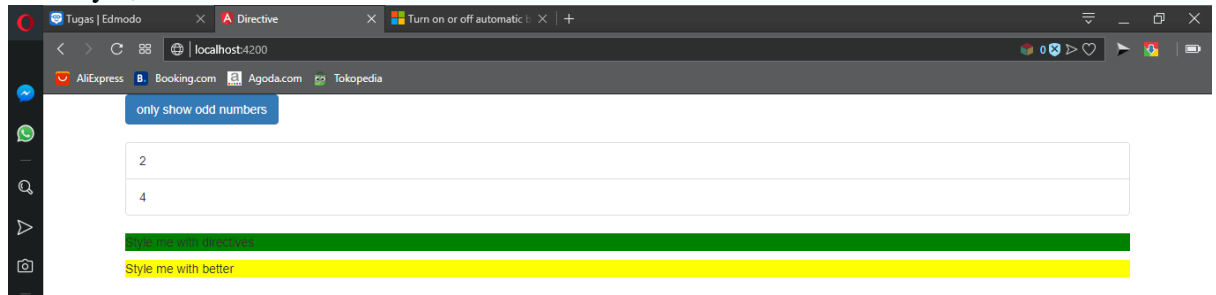

5. Menggunakan alias pada highlightColor

```
@Input() defaultColor: string = 'transparent';
@Input('appBetterHighLight') highlightColor: string = 'blue';
// @HostBinding('style.backgroundColor') backgroundColor: string = this.defaultColor;
```

6. Mengubah line 29 pada app.component.html

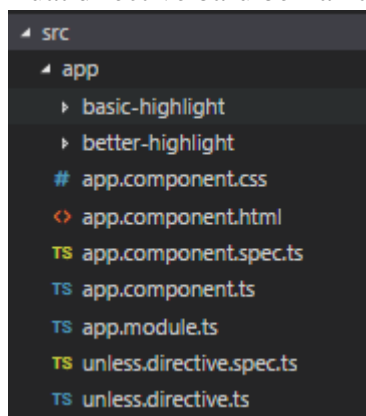

```
28 <appBasicHighlight> Style me with directives </p>
29 <p [appBetterHighlight]= "red" [defaultColor]='yellow'"> Style me with better </p>
```

Hasilnya ;

CUSTOM DIRECTIVE

1. Buat directive baru bernama unless

2. Ubah unless.directive.ts menjadi berikut

```
1  import { Directive, Input, TemplateRef, ViewContainerRef } from '@angular/core';
2
3  @Directive({
4    selector: '[appUnless]'
5  })
6  export class UnlessDirective {
7
8    @Input() set unless(condition: boolean) {
9      if (!condition) {
10        this.vcRef.createEmbeddedView(this.templateRef);
11      } else {
12        this.vcRef.clear();
13      }
14    }
15
16    constructor(private templateRef: TemplateRef<any>, private vcRef: ViewContainerRef) { }
17
18  }
```

```

27     <div *appUnless="onlyOdd">
28       <li class="list-group-item"
29         [ngClass]="{'odd': true}"
30         [ngStyle]="{'backgroundColor': true ? 'yellow'"
31         *ngFor="let odd of oddNumbers">
32         {{ odd }}
33       </li>
34     </div>

```

3.

Ini akan menghasilkan error

```

✖ Uncaught Error: Template parse errors:
  Can't bind to 'appUnless' since it isn't a known property of 'div'. ("
    </li>
    </div> -->
    <div [ERROR ->]*appUnless="onlyOdd">
      <li class="list-group-item"
        [ngClass]="{'odd': true}"
        [ngStyle]="{'backgroundColor': true ? 'yellow'"
        *ngFor="let odd of oddNumbers">
        {{ odd }}
      </li>
    </div> -->
    [ERROR ->]<div *appUnless="onlyOdd">
      <li class="list-group-item"
        [ngClass]="{'odd': true}"
        [ngStyle]="{'backgroundColor': true ? 'yellow'"
        *ngFor="let odd of oddNumbers">
        {{ odd }}
      </li>
    </div> -->
  ")
  Property binding appUnless not used by any directive on an embedded template. Make sure that the property name is spelled correctly and all directives are listed in the
  "@NgModule.declarations". ("
    </li>
    </div> -->
    [ERROR ->]<div *appUnless="onlyOdd">
      <li class="list-group-item"
        [ngClass]="{'odd': true}"
        [ngStyle]="{'backgroundColor': true ? 'yellow'"
        *ngFor="let odd of oddNumbers">
        {{ odd }}
      </li>
    </div> -->
  ")
  compiler.js:1021

```

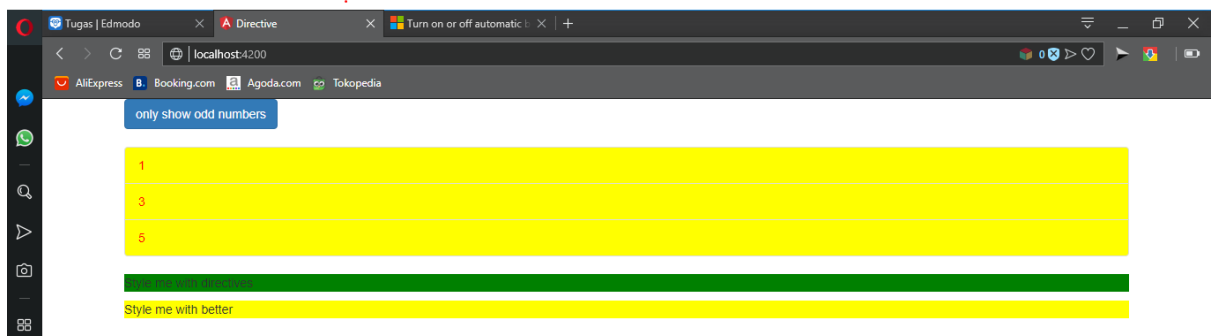

4. Ubah menjadi seperti ini

```

1  import { Directive, Input, TemplateRef, ViewContainerRef } from '@angular/core';
2
3  @Directive({
4    selector: '[appUnless]'
5  })
6  export class UnlessDirective {
7
8    @Input() set appUnless(condition: boolean) {
9      if (!condition) {
10        this.vcRef.createEmbeddedView(this.templateRef);
11      } else {
12        this.vcRef.clear();
13      }
14    }
15
16    constructor(private templateRef: TemplateRef<any>, private vcRef: ViewContainerRef) { }
17
18  }
19

```

Hasilnya :

NGSWITCH

1. Tambahkan kode ini pada app.component.ts

```
// ...  
export class AppComponent {  
  title = 'NgFor-NgIf';  
  // numbers = [1, 2, 3, 4, 5];  
  oddNumbers = [1, 3, 5];  
  evenNumbers = [2, 4];  
  onlyOdd = false;  
  value = 5;  
}
```

2. Tambahkan kode ini pada app.component.html

```
38     <span [ngSwitch]="value">  
39       <p *ngSwitchCase="5">  
40         value is 5  
41       </p>  
42       <p *ngSwitchCase="10">  
43         value is 10  
44       </p>  
45       <p *ngSwitchDefault>  
46         value is default  
47       </p>  
48     </span>
```

Hasilnya :
